

That Which Is Claimed Is:

1. A splicing cassette management system for an
5 optical waveguide distribution cabinet, comprising two
or more splicing cassettes which are arranged in a
splicing cassette holder mounted on a withdrawable
mounting device and can be moved together with the
mounting device on a first plane, and in that the
10 splicing cassette holder can be pivoted from the first
plane to a second plane.
2. The splicing cassette management system as claimed
in claim 1, wherein the second plane runs approximately
15 at right angles to the first plane.
3. The splicing cassette management system as claimed
in claim 1 wherein the withdrawable mounting device is
mounted in a housing via guide rails, and in that the
20 splicing cassette holder can be withdrawn from the
housing together with the mounting device via the guide
rails on two opposite sides of the housing (11).
4. The splicing cassette management system as claimed
25 in claim 3, wherein the mounting device is in the form
of a drawer.
5. The splicing cassette management system as claimed
in claim 1, wherein the splicing cassette holder has a
30 pivoting device on one of its sides, in which case the
splicing cassette holder is mounted on the mounting
device via the pivoting device and can be folded from
the first plane to the second plane.
- 35 6. The splicing cassette management system as claimed
in claim 5, wherein the pivoting device is in the form
of a latching joint.
